

CuisineCompass Product Requirement Summary

Slogan:

Discover, explore, and experience Auckland's best restaurants and food culture.

CuisineCompass goes beyond maps and ratings—every restaurant has a story, culture, and a reason to be recommended. Our platform helps users find not just where to eat, but what makes each place special.

Restaurant

- Browse and search for restaurants using keywords, main tags (cuisine, flavor, scene), or by exploring the map.
- Filter restaurants based on cuisine type, flavor, or dining scene to find what matches their preferences.
- View restaurant details including photos, description, signature dishes, ratings, tags, story, and cultural background.
- Get personalized recommendations based on their interests or recent activity.
- Add or remove restaurants from favorites to keep track of places they like.

Users

- Register and log in to create a personal account (optional for MVP, but supports future features).
- View and manage their profile, including basic info and preferences.
- Save favorite restaurants for easy access later.
- Check their browsing and search history (used for improving recommendations and personal discovery).
- See visited restaurants (check-ins or dining history, if supported).
- Receive personalized recommendations based on their favorites, searches, and recent activity.
- Contribute reviews or ratings for restaurants (for future versions/community features).

Reviews

- Check in to a restaurant after visiting, then submit a rating (1-5 stars) if desired. Each user can only review a restaurant after check-in.
- View all reviews and ratings for a restaurant, including aggregated average ratings and check-in statistics.
- See their own check-in and rating history for restaurants they have visited.
- (For future versions) Update or delete their rating, and optionally add text comments or photos to reviews.
- (For future versions/community features) See and interact with other users' reviews—such as upvoting helpful reviews, or replying to comments.

Map

- View an interactive map of Auckland featuring curated restaurant locations as map markers.
- Explore all featured restaurants geographically—see nearby options or browse by area.
- Click any marker to see key information (name, cuisine, average rating, etc.) and navigate to the full restaurant detail page.
- Filter displayed restaurants on the map using cuisine, flavor, or scene tags to focus on personal preferences.
- Search the map with keywords or tag filters to quickly discover restaurants that match specific interests.

- (For future versions) Get personalized map recommendations—see highlighted restaurants based on user history or preferences.
- (For future versions) Display user's current location and recommend nearby restaurants (requires user consent for geolocation).

Admin

- Add, edit, or delete restaurants and dishes (CRUD for restaurants/dishes).
- View and manage all registered users (including deactivate/delete).
- Review and moderate all ratings and reviews.
- (For future versions) Bulk import restaurants/dishes from files (e.g., CSV, Excel).
- All actions restricted to admin accounts only.

System

- Ensure the backend service is up and healthy (used in CI pipelines and K8s readiness checks).
- Allow frontend/app to confirm API version and compatibility before feature usage.
- Provide ops/admin with a snapshot of system load and active connections for troubleshooting.
- These endpoints are designed for health monitoring, CI/CD automation, and API compatibility checks.

Note:

Other features can be added based on user feedback or business needs in future versions.
