

Use Case Descriptions for Admin

ID	UC36
Use Case	Add/Edit/Delete Restaurants
Actor(s)	Admin
Trigger	Admin performs CRUD
Description	Manage restaurant data
Preconditions	Admin login
Postconditions	Restaurant data updated
Main Flow	1. Admin inputs form
	2. System saves changes

ID	UC37
Use Case	Add/Edit/Delete Dishes (Future)
Actor(s)	Admin
Trigger	Admin performs CRUD
Description	Manage dish details for restaurants
Preconditions	Admin login
Postconditions	Dish info updated
Main Flow	1. Admin updates dishes
	2. Changes saved

📌 The dish management feature (Add/Edit/Delete Dishes) is marked as a "Future" use case because reliable and comprehensive dish data for restaurants is currently difficult to obtain. At this stage, we do not have enough accurate information about specific dishes to support implementation of this feature. Once sufficient dish data becomes available—either through improved data collection or partnerships with restaurants—we plan to revisit and develop this functionality in a future release.

ID	UC38
Use Case	Manage Users (Future)
Actor(s)	Admin

Trigger	Admin opens user dashboard
Description	Deactivate or delete user accounts
Preconditions	Admin login
Postconditions	User list updated
Main Flow	1. Admin selects user
	2. Action performed

📌 This user management feature (such as deactivating or deleting user accounts) is planned for future development. Once we introduce additional features like comments, reviews, or other community interactions, more comprehensive user management will become necessary to ensure platform safety and user experience. At that stage, we will implement advanced admin controls.

ID	UC39
Use Case	Moderate Reviews (Future)
Actor(s)	Admin
Trigger	Admin checks flagged content
Description	Review and manage ratings/reviews
Preconditions	Admin login
Postconditions	Reviews may be edited/deleted
Main Flow	1. Admin reviews content
	2. Takes action

ID	UC40
Use Case	Bulk Import (Future)
Actor(s)	Admin
Trigger	Admin uploads file
Description	Add many entries via CSV/Excel
Preconditions	File prepared
Postconditions	Records imported to DB
Main Flow	1. Admin uploads file
	2. System parses & adds
