

Use Case Descriptions for Visitors and Registered Users

Use Case ID	UC01
Use Case	Browse Restaurent(s)
Actor(s)	Visitor, Registered User
Triggering Event	The user opens the home page
Brief Description	Allows general browsing of restaurants
Preconditions	-
Postconditions	All or the requested Restaurent details are displayed
Main Flow of Activities	1. User opens the site 2. Homepage displays curated restaurants

Use Case ID	UC02
Use Case	Search by Keywords
Actor(s)	Visitor, Registered User
Triggering Event	User keys in a Keyword
Brief Description	Allows searching restaurants by name or dish (We can improve this later to include other types)
Preconditions	-
Postconditions	Search Results are displayed
Main Flow of Activities	1. User types a keyword 2. System displays matches

ID	UC03
Use Case	Search on Map (Future)
Actor(s)	Visitor, Registered User
Trigger	User enters map keyword
Description	Searches for restaurants on the map view

Preconditions	Map open
Postconditions	Search results displayed on map
Main Flow	1. User enters search
	2. Map updates view

🌿 Location Visualization : The map will display the locations of featured restaurants, allowing users to get an overview of where the top-rated places are situated. Users can click on the location markers to view basic information or navigate to the detail page. Full text search on the map is not supported for this MVP.

ID	UC04
Use Case	Search by Emotion/Mood (Future)
Actor(s)	Registered User
Trigger	User types “craving”, “feeling”
Description	Parses natural language to identify dish types/cultures
Preconditions	LLM service reachable
Postconditions	Filtered result set shown
Main Flow	1. User inputs natural language
	2. LLM interprets and returns intent
	3. System maps to dish/cuisine tag

ID	UC05
Use Case	Personalized Map (Future)
Actor(s)	Registered User
Trigger	User opens map
Description	Shows user-specific suggestions
Preconditions	Logged in with data
Postconditions	Map shows tailored results
Main Flow	1. System analyzes history
	2. Highlights relevant markers

ID	UC06
Use Case	Nearby Restaurants (Future)
Actor(s)	Registered User
Trigger	User enables location
Description	Uses geolocation for local suggestions
Preconditions	Location permission
Postconditions	List/map of nearby shown
Main Flow	1. User allows location
	2. Nearby data loaded

ID	UC07
Use Case	Filter Restaurants
Actor(s)	Visitor, Registered User
Trigger	User selects filters
Description	Provides filters (cuisine, mood, map tags, keywords) to refine listings
Preconditions	None
Postconditions	Filtered list displayed
Main Flow	1. User selects filter tags
	2. System filters list

🌱 It's best to focus on what users need most right now. A simple, specific filter for restaurants is more valuable (and practical) at this stage than building a generic filter for all lists.

ID	UC08
Use Case	Filter Restaurants (Future) (We would need some solid features to get marks. And this might be one of the basics)
Actor(s)	Visitor, Registered Users
Trigger	User selects filters
Description	Filters restaurant list by cuisine, flavor, scene
Preconditions	None

Postconditions	Filtered list displayed
Main Flow	1. User selects filter tags
	2. System filters list

ID	UC09
Use Case	Filter Map Tags (Future)
Actor(s)	Visitor, Registered User
Trigger	User selects map filters
Description	Filters map markers by tag
Preconditions	Map open
Postconditions	Filtered markers shown
Main Flow	1. User selects filters
	2. System updates map

🌱 I only want to have one “filter” entry point on the list page. Once the user applies filters, the map will simply reflect the filtered results—there’s no need to filter again on the map page.

ID	UC10
Use Case	View Content (same as UC11 - No this is Actually the main View Content use case. UC11 is the include Use case)
Actor(s)	Visitor, Registered User
Trigger	Visitors generally explore Registered Users logs in and explores
Description	Allows users to view restaurant data, stories, history, and reviews.
Preconditions	For registered Users - Logged in
Postconditions	Related content displayed

ID	UC11
Use Case	View Restaurant Details
Actor(s)	Visitor, Registered User

Trigger	User clicks a restaurant (User clicks a restaurant on the list or map.)
Description	Shows full details of a Restaurant. (show detailed page of restaurant)
Preconditions	None
Postconditions	Restaurant page displayed with story and media if available.
Main Flow	1. User clicks a restaurant
	2. System displays details
	3. If the restaurant has a cultural story, system displays text/audio/video section.

ID	UC12
Use Case	View Ratings & Reviews
Actor(s)	Visitor, Registered User
Trigger	User scrolls to reviews
Description	Shows all reviews/ratings of a restaurant
Preconditions	Restaurant has reviews
Postconditions	Reviews and stats displayed
Main Flow	1. User views restaurant
	2. System loads reviews

ID	UC13
Use Case	View Map Markers
Actor(s)	Visitor
Trigger	User hovers/clicks marker
Description	Displays quick info popup for restaurant
Preconditions	Map loaded
Postconditions	Popup with info displayed
Main Flow	1. User interacts with marker

	2. System shows preview
--	-------------------------

ID	UC14
Use Case	View History (Future)
Actor(s)	Registered User
Trigger	User navigates to history
Description	Shows past searches and browsed restaurants
Preconditions	Logged in
Postconditions	History displayed
Main Flow	1. User opens history
	2. System loads records

🌱 Implementing this feature would require extra work on user authentication, backend session management, and data storage. This would add significant complexity to our project and may delay the delivery of our core features. Therefore, we decided to treat it as a future enhancement, to be developed only after the main features are stable and complete.

ID	UC15
Use Case	View Own Ratings
Actor(s)	Registered User
Trigger	User visits reviews section (open profile page)
Description	Displays their ratings/check-ins
Preconditions	Logged in with data (and rated at least one restaurant.)
Postconditions	Review history shown
Main Flow	1. User views review history
	2. System loads data

🌱 Allows users to view their own ratings either within each restaurant's detail page (shows their rating for that specific restaurant) or in their personal profile (shows a list of all restaurants they have rated and the corresponding ratings).

ID	UC16
Use Case	View Dining History

Actor(s)	Registered User
Trigger	User accesses check-in history (open profile page)
Description	Lists previously visited restaurants
Preconditions	User has check-ins
Postconditions	Dining history shown
Main Flow	1. User opens dining history (open profile page)
	2. Records shown

ID	UC17 (same as UC11) show detail page of restaurant
Use Case	Display Story Behind Dish
Actor(s)	Visitor, Registered User
Trigger	User views a dish or restaurant
Description	Shows cultural or historical context of the dish
Preconditions	Dish has story metadata
Postconditions	Story displayed alongside dish
Main Flow	1. User views restaurant
	2. System retrieves story (owner quote, origin)
	3. UI displays it with image/audio

ID	UC18 (inteseesting)
Use Case	Learn Cultural Fact (Daily)
Actor(s)	Visitor, Registered User
Trigger	Homepage loaded or clicked
Description	Displays a rotating cultural food fact or trivia
Preconditions	None
Postconditions	Fact displayed
Main Flow	1. System selects random fact
	2. Displays in “CulturalFactBox” component

🌱 The key to this feature is all about gathering a diverse and interesting set of cultural food facts. Technically, it's very easy to implement—a simple rotating fact box—but the true value comes from how engaging and educational your content is. If you get the data right, this feature can be both fun and meaningful, and set your site apart from ordinary restaurant lists!

ID	UC19
Use Case	Story-Driven Restaurant Discovery
Actor(s)	Visitor, Registered User
Trigger	User chooses cultural trail
Description	Explore curated restaurant “stories” by culture or festival
Preconditions	Trails pre-defined
Postconditions	Filtered restaurant list shown
Main Flow	1. User clicks “Taste of Tamil Nadu” trail
	2. System lists matching restaurants
	3. User can view each story

🌱 For the “Cultural Trails” feature, we will start with two fixed sample routes (“Taste of China” and “Korean BBQ Walk”) hardcoded for the MVP. If time allows, we may later refactor the implementation to support dynamic trail management via a backend API, allowing future expansion and easier content updates.

ID	UC20
Use Case	QR Code Scan at Venue (Future)
Actor(s)	Visitor, Registered User
Trigger	User scans code at restaurant
Description	Loads digital storycard (story, language, etiquette, etc.)

ID	UC21
Use Case	Receive Restaurant Recommendations
Actor(s)	Registered User
Trigger	System Triggers or User enters mood/craving in explore page
Description	Provides personalized restaurant suggestions based on user data or input prompts
Preconditions	Logged in with history or input

Postconditions	Recommended suggestions shown
----------------	-------------------------------

ID	UC22
Use Case	Get Recommendations
Actor(s)	Registered User
Trigger	System or user triggers
Description	Suggests restaurants based on behavior
Preconditions	Logged in with history
Postconditions	Personalized list shown
Main Flow	1. User visits explore
	2. System analyzes & shows recs

ID	UC23
Use Case	Get Cultural Food Recommendation
Actor(s)	Registered User
Trigger	User enters mood/craving in explore page
Description	Suggests restaurants/dishes based on emotional/cultural input using LLM
Preconditions	User is logged in
Postconditions	Personalized suggestions shown
Main Flow	1. User opens Explore page
	2. User inputs mood (e.g. "nostalgic and cold")
	3. System calls HuggingFace LLM4. Suggestions are displayed

ID	UC24
Use Case	Explore via Map (Future)
Actor(s)	Visitor, Registered User
Trigger	User opens map

Description	Displays all restaurants geographically
Preconditions	None
Postconditions	Interactive map shown
Main Flow	1. User accesses map
	2. Markers displayed

ID	UC25
Use Case	Register Account
Actor(s)	Visitor
Trigger	User chooses to sign up
Description	Allows account creation
Preconditions	Valid form submission
Postconditions	User is registered
Main Flow	1. User enters info
	2. System validates
	3. Account created
