

Workflow

1. Main User Flow

Main Flow:

User visits homepage → Browses restaurant list → Filters/searches → Views details → Rates/reviews/favorites/views cultural stories → User profile → Returns/exits

Alternative Flows:

- Restaurant list fails to load → Show error message and retry button
- No search results → Show "No results", allow user to modify keywords
- Error loading details page → Show error prompt, return to list page
- User tries to rate/review/favorite without logging in → Pop up login prompt, redirect back after login
- User already rated/favorited → Button grayed out or show "Already operated"
- Network disconnects → Global prompt, allow retry or cache page

[User opens homepage]

[Browse restaurant list] ← —→ [Data loading failed / No data / Retry]

[Filter restaurants] ← —→ [No results / Error / Retry]

[Enter restaurant details]

[View ratings / reviews / stories / recommended restaurants]

[Rate / review / favorite]

[Already rated / favorited / not logged in] → [Show message: already operated or need login]

[View related cultural routes / similar recommendations]

[Enter user profile] ← —→ [Manage favorites / history]

[Back to homepage / logout]

2. User Registration/Login Flow

Main Flow:

Click register/login → Fill in information or choose third-party login → Registration/login successful → Redirect to homepage or previous page

Alternative Flows:

- Incomplete/invalid registration information (weak password, duplicate email, etc.) → Highlight form error, block submission
- Third-party login fails (e.g., authorization denied) → Show failure reason, allow retry

- Registration/login API error or network issue → Friendly error message, retry button
- Registration succeeds but email not verified → Prompt user to verify email, limit features until verified

[Click Register/Login]

↓

[Fill in information / choose third-party login]

↓

[Register/Login successful] → [Redirect to homepage or previous page]

↘

[Register/Login failed] → [Show reason, allow retry]

3. Admin Backend Flow (Admin Perspective)

Main Flow:

Admin logs in to backend → Manages restaurants/users/comments/stories → Adds/edits/deletes → Data import/export/statistics → Logs out

Alternative Flows:

- Admin login fails (wrong username/password) → Show error, allow retry
- Non-admin tries to access backend → Access denied, show insufficient permission
- Incomplete restaurant info on add/edit → Form validation prompt, block submission
- Data import format error/failure → Show failure reason, ask to correct
- Backend API errors → Log error, show popup alert, suggest contacting technical support

[Admin logs in to backend]

↓

[Manage restaurants]

↓

[Add/Edit/Delete restaurants]

↓

[Review comments / publish cultural stories / manage users]

↓

[Data import/export, statistics, analytics]

↓

[Logout]

4. Cultural Content/Story/Route Browsing & Interaction

Main Flow:

User views stories/routes in the culture section or restaurant detail → Likes/comments/favorites → Returns/continues

Alternative Flows:

- Story/route fails to load → Show loading failure, allow retry
- Not logged in, tries to like/comment/favorite → Pop up login prompt
- Already liked/favorited → Change button state or show "Already operated"
- Comment violates rules or contains sensitive words → Reject post, show reason

- Like/comment request fails (e.g., API error) → Show error, allow retry

[User browses cultural content/stories/routes on culture tab or restaurant detail page]

↓

[Like / comment / favorite cultural story]

↓

[Back to culture tab or continue]

5. Exception & Edge Case Flows (Global)

Alternative Flows:

- Network timeout or API request fails → General error prompt/retry option
- Insufficient permissions (e.g., normal user tries to access admin page) → Access restricted prompt
- Empty data or loading timeout → Show "No data" or "Load failed", allow refresh/retry
- Multi-user conflict (duplicate comments/ratings, etc.) → Error prompt, prevent duplicate action
- System maintenance or upgrade → Show maintenance notice, limit certain features
