

Testing Process & Workflow

This page describes the standard testing process for the CuisineCompass project.
Each step indicates what should be done, when, by whom, and what the deliverables are.

Testing Workflow Stages

Stage	What to Do	Owner	Deliverable / Record	When
1. Requirement Review	Join requirements/design meetings. Identify test points.	QA / All	Requirements checklist	At the start of project / each sprint
2. Test Planning	Draft test plan: scope, strategy, schedule, risks, resourcing	QA Lead	Test Plan (Confluence page)	Before dev starts / at sprint start
3. Test Case Design	Write test cases for each module/feature (functional, API, UAT)	QA	Test Case Library	During development / before testing
4. Environment Setup	Coordinate test environment setup; prepare test data	QA + DevOps	Env checklist; data records	Before/at start of testing phase
5. Test Execution	Run test cases (manual/auto); log bugs; re-test fixes	QA	Sprint Testing Checklist, Bug List	Main testing week(s)
6. Defect Tracking	Track bug fixing progress in Jira; verify and close issues	QA + Dev	Updated Bug List in Jira	In parallel with execution
7. UAT Preparation	Prepare scripts; invite	QA + PO	UAT Scenario Checklist	Before release

	business/user to test			
8. UAT Execution	Guide UAT session; collect feedback; report summary	QA + PO/User	UAT Feedback Report	Just before go-live
9. Test Reporting	Summarize test results, coverage, key risks & recommendations	QA Lead	Sprint Test Report	End of sprint / release

Example Timeline (per sprint)

- **Week 1:** Requirements review, test plan, draft test cases
 - **Week 2:** Finalize test cases, setup environment, start test execution
 - **Week 3:** Continue testing, defect tracking, prepare UAT scripts
 - **Week 4:** UAT, regression, reporting, sign-off

Documentation Map

- Test Plan
 - Test Case Library
 - Sprint N Testing Checklist
 - Bug List
 - UAT Feedback
 - Test Summary / Report
-

Best Practice

- Link all Sprint Testing Checklists to this Testing Process page.
 - For each test phase, update progress and issues in both the checklist and Jira Epic/tasks.
 - Archive all test deliverables after each sprint/release for traceability.
-
